

ABSTRACT OF THE DISCLOSURE

5 A plug securing device that allows improved retention of an electrical cord in an electrical outlet. The plug securing device consists of a replacement electrical outlet cover, and a plug securing device. The plug from a power cord is placed through a slot in the plug securing device, and the plug and plug securing device is placed into the outlet and the replacement electrical outlet cover. The plug securing device is removed and the plug disconnected from the outlet when the user pressed the plug securing device into the replacement electrical cover and presses in on the sides of the plug securing device. The invention allows for a child and or paint
10 cover that engages in the electrical cover and covers the entire electrical outlet and replacement electrical outlet cover.
